Choose Model

3 1/2" X 5 1/2" AND BIG ENOUGH TO REVOLUTIONIZE THE INDUSTRY.

The small wonder, on steroids. Along with efficiency of space, an astounding one-year battery life and a one-second trigger speed, the 2010 Trophy Cams are juiced up to a whole new level of performance. All models have been upgraded from 24 to 32 night-vision LEDs for improved image quality after dark. Heightened resolution is now a selectable 3, 5 or 8 megapixels. And still featuring a PIR sensor coverage area 3x larger than any camera we've built before, Trophy Cams are now compatible with up to a 16GB SD card for unmatched image capacity. Select up to three rapid-fire images per trigger, or a 1 second to 60 minute delay. Video mode records a programmable 1 to 60 seconds of footage with enhanced resolution for 2010. Plus, an improved 2" built-in viewer (optional) gives you an instant look at what's passed by. Viewer models now have an image stamp with date, time, temperature and moon phase.

Features

- 3, 5 or 8 MP high-quality full color resolution
- Day/night autosensor
- External power compatible
- Widescreen, VGA, QVGA Video at 20 FPS
- Adjustable PIR (Lo/Med/High)
